## The Kiss of Death: A 5-Star Morningstar Mutual Fund Rating?

By

**Matthew R. Morey**  
**Department of Finance**

**One Pace Plaza**  
**New York, NY 10025**

### Abstract

We examine the effect that an initial 5-star Morningstar mutual fund rating has on future fund performance, strategy, risk-taking, expenses, and portfolio turnover. Using a sample of diversified domestic equity funds from the 1990s we find that three-years after a fund received its initial 5-star rating, fund performance severely falls off. This result is robust across different performance measures and different samples of funds. We also find that after receiving their initial 5-star rating, the risk levels of funds rise and that the funds are not able to load on momentum stocks as well as they did before receiving the 5-star rating. These results suggest that funds, to some degree, alter their portfolios after receiving a 5-star rating and that investors should be very wary about using the 5-star rating as a signal of future 3-year performance.

Key Words: Mutual Funds, Morningstar, Fund Ratings, Performance persistence

# Syklikalitet kan forklare hvorfor flere «toppfond» faller tilbake

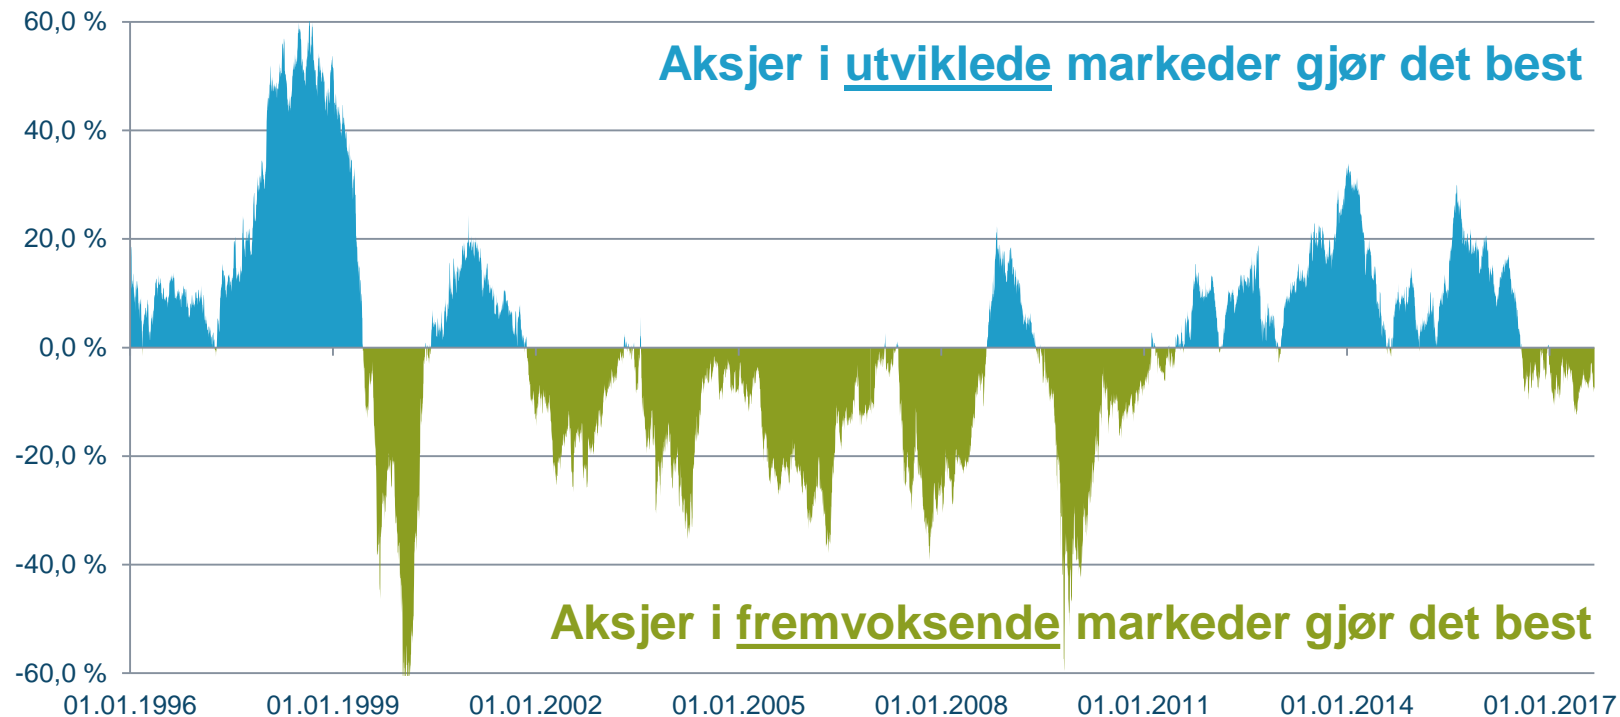

12 måneder rullerende avkastningsforskjell mellom MSCI World Value og MSCI World Growth

### ABSTRACT

## On the Industry Concentration of Actively Managed Equity Mutual Funds

MARCIN KACPERCZYK, CLEMENS SIALM, and LU ZHENG\*

### ABSTRACT

Mutual fund managers may decide to deviate from a well-diversified portfolio and concentrate their holdings in industries where they have informational advantages. In this paper, we study the relation between the industry concentration and the performance of actively managed U.S. mutual funds from 1984 to 1999. **Our results indicate that, on average, more concentrated funds perform better after controlling for risk and style differences using various performance measures.** This finding suggests that investment ability is more evident among managers who hold portfolios concentrated

## Active Share and Mutual Fund Performance

Antti Petajisto

Using Active Share and tracking error, the author sorted all-equity mutual funds into various categories of active management. **The most active stock pickers outperformed their benchmark indices even after fees, whereas closet indexers underperformed.** These patterns held during the 2008–09 financial crisis and within market-cap styles. Closet indexing has increased in both volatile and bear markets since 2007. Cross-sectional dispersion in stock returns positively predicts performance by stock pickers.

Should a mutual fund investor pay for active fund management? Generally, the answer is no. A number of studies have concluded that the average actively managed fund loses to a low-cost index fund, net of all fees and expenses.<sup>1</sup> However, active managers are not all equal: They differ in how active they are and what type of active management they practice. These distinctions allow us to distinguish different types of active managers, which turns out to matter a great deal for investment performance.

In my study, following Cremers and Petajisto (2009), I divided active managers into several categories on the basis of both Active Share, which measures mostly stock selection, and tracking error, which measures mostly exposure to systematic risk. Active stock pickers take large but diversified positions away from the index. Funds that focus on factor bets generate large volatility with respect to the index even with relatively small active positions. Concentrated funds combine very active stock selection with exposure to systematic risk.

tuent of the financial average, actively managed fund managers might in this paper, we examining their portfolios widely diversify their idiosyncratic risk. Fund

## Fond som har utviklet seg veldig bra over tid ...

## ... kan ha perioder med solid mindreavkastning

### 3 mnd rullerende mer-/mindreavkastning for Lindsell Train Global Equity vs. MSCI World

# Hva om vi inkluderer ett ekstra fond?

## 3 mnd rullerende mer-/mindreavkastning

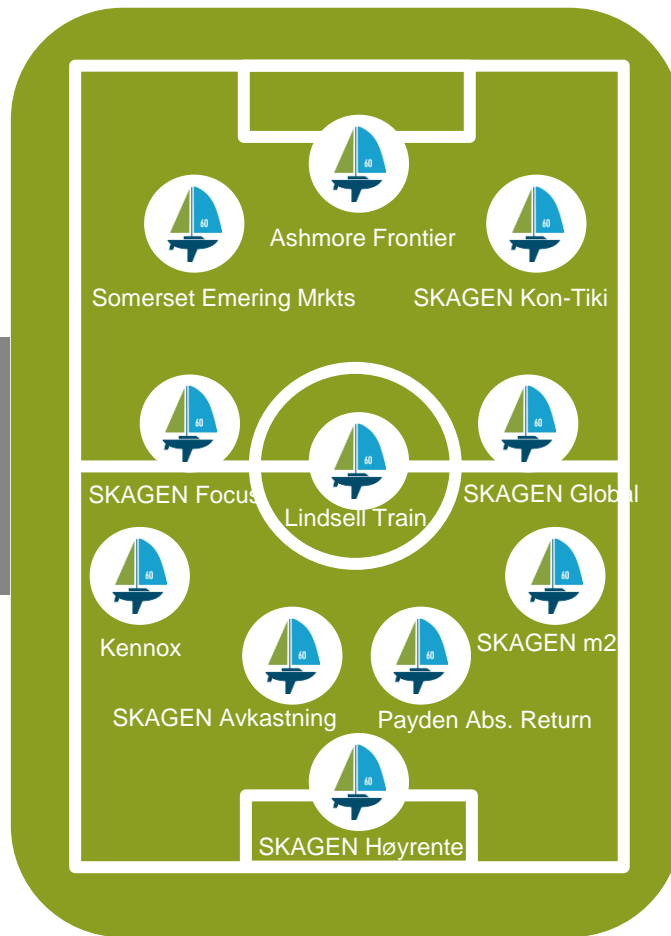

# Portefølje med 50% i hver av de to fondene

## 3 mnd rullerende mer-/mindreavkastning

# Derfor man optimerer sin portefølje ved å finne bestemte typer

# Oppsummering

Ikke løp etter historisk avkastning  
– Forstå hvorfor fondet har prestert som det har gjort

Ikke stol utelukkende kvantitative ratinger

Bygg en portefølje med konsentrerte fond, høy aktiv andel og som komplementerer hverandre

### SKAGEN Select 100

Størst avkastningsmuligheter og størst svingninger.

### SKAGEN Select 80

Høy avkastningsmulighet med en mindre andel renter for stabilitet.

**Om dere sliter med å bygge egen portefølje**

### SKAGEN Select 60

Overvekt av aksjer med en stabiliserende andel renter.

**– så husk at denne karen sitter klar til å hjelpe dere**

### SKAGEN Select 30

Bedre avkastningsmuligheter enn en tradisjonell sparekonto med moderate svingninger.

### SKAGEN Select 15

Lav risiko men bedre avkastningsmulighet enn bankkonto
